

Drone pilots, regulators and insurance companies need solutions that make drones trackable and accountable. Red Cat is the leading provider of distributed data storage, analytics and services for the growing recreational and commercial drone industry.

Blockchain Black Box

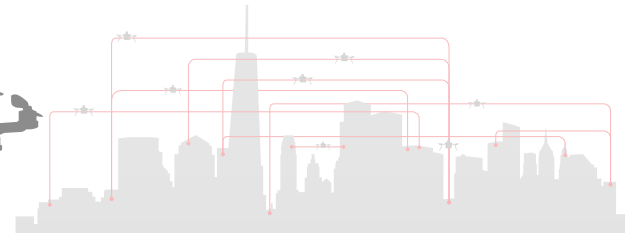

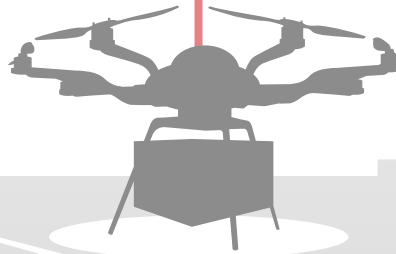

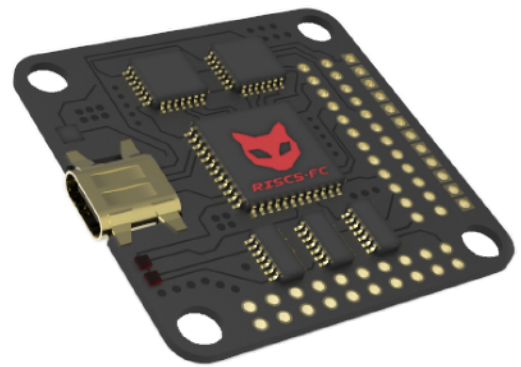

Red Cat's black box drone flight recorder is the first distributed system with security and encryption that regulators and insurance companies can trust. Red Cat's drone analytics and storage allow flight replay with customizable reports that can determine fault or performance issues.

- Encrypted Flight Logs
- Trusted Information
- Drone Self Diagnosis AI
- Increased Performance

RISC V Flight Controller

Red Cat has partnered with UPR Mayagüez on a research program to develop an open sourced based flight controller with the world's fastest open source RISC V processor. This System On a Chip (SOC) allows us to embed the software into hardware giving the flight controller 10x the performance of existing flight controllers.

The Experience

Jeff CEO

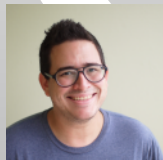

Our team is lead by Jeff Thompson, a serial entrepreneur who has founded two successful tech startups.

- Founder Edgenet (sold to Citadel broadcasting 1997)
- Co-founder Towerstream (public 2007 NASDAQ)

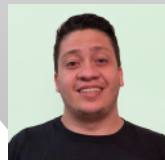

Jeff Thompson, CEO has surrounded himself with bright minds with a strong appetite for the startup lifestyle. In 2016 the company moved to Puerto Rico and has been able to build a great team with UPR University graduates.
